# MUHAMMAD WALEED ASAF

**DevOps Engineer**

+92 325 5653654 | iwaleedasaf@gmail.com | waleedasaf.github.io | linkedin.com/in/waleed-asaf-devops

## PROFESSIONAL SUMMARY

DevOps Engineer with around 2 years of experience automating AWS infrastructure using Terraform and designing CI/CD pipelines with GitHub Actions. Skilled in Linux system administration, containerized deployments with Docker and Kubernetes/EKS, and monitoring with Prometheus, Grafana, and CloudWatch in production environments. Cut deployment time by up to 50% and provisioning effort by up to 80%, while driving cloud cost reductions of 30% through infrastructure optimization.

## TECHNICAL SKILLS

**Cloud & Infrastructure as Code:** AWS (EC2, ECS, S3, RDS, Lambda, VPC, IAM, DNS, Load Balancing, SSL), Terraform, CloudFormation
**Containers & Orchestration:** Docker, Kubernetes, Amazon ECS, Amazon EKS, Helm
**CI/CD and Version Control:** Git, GitHub, GitHub Actions, CI/CD Pipeline Design, Argo CD, GitOps
**Monitoring & Reliability:** Prometheus, Grafana, Amazon CloudWatch, EFK Stack, OpenTelemetry, Jaeger, OpenSearch
**Security:** IAM & Security Groups, Gitleaks Secret Scanning, Pre-Commit Security Hooks, Dependabot, OWASP Threat Dragon, SOC2, HIPAA, and CIS Benchmark-aligned controls
**Programming & Scripting:** Python (Boto3), Bash
**Systems:** Linux Administration

## PROFESSIONAL EXPERIENCE

**Junior DevOps Engineer —** WriteO, Lahore, Pakistan **Jul 2025 – Sept 2026**

- Served as the primary point of contact for developers on CI/CD and deployment issues, owning end-to-end pipeline design and delivery with GitHub Actions and evaluating third-party tooling (Gitleaks, Dependabot), cutting deployment time by ~40% and reducing manual release effort across environments.
- Architected and provisioned scalable AWS infrastructure (VPC, security groups, ALB/ELB, Route 53) as code with Terraform, incorporating Ansible for configuration management to improve consistency, access control, and reliability.
- Automated resource tagging and EC2 lifecycle management using Python (boto3) scripts, reducing manual cleanup effort.
- Implemented monitoring, logging, alerting, and tracing with CloudWatch, Prometheus/Grafana, and EFK in Linux production environments, troubleshooting and resolving incidents with minimal escalation while maintaining infrastructure documentation.

**Cloud Support Engineer —** Softoholic, Birmingham, UK (Remote) **Oct 2024 – Jun 2025**

- Provisioned and managed AWS resources (EC2, S3, IAM) and administered DNS (Route 53), load balancing, and SSL certificate management, supporting scalable infrastructure operations, access control, and cost monitoring.
- Troubleshot cloud-based workload incidents in Linux environments, documenting resolutions in a team knowledge base to improve incident response time.

## KEY PROJECTS

### Cloud-Native E-Commerce DevOps Platform | AWS EKS

- Provisioned AWS infrastructure using modular Terraform, including VPC networking, public/private subnets, Internet/NAT gateways, Amazon EKS, IAM roles, and configurable EKS node groups; implemented S3 remote state with DynamoDB state locking.
- Containerized and deployed a polyglot microservices e-commerce application using Docker and Kubernetes, configuring Deployments, Services, service accounts, inter-service discovery, and workload lifecycle management on EKS.
- Configured AWS Load Balancer Controller with EKS IAM/OIDC integration and Helm, exposing the frontend through Kubernetes Ingress and routing external traffic through an internet-facing Application Load Balancer.
- Implemented GitOps-based CI/CD using GitHub Actions for continuous integration and Argo CD for continuous delivery, automating application changes through Kubernetes deployment synchronization.
- Implemented observability using OpenTelemetry, with telemetry routed through the OpenTelemetry Collector and visualized through metrics, distributed tracing, and centralized logging components including Prometheus, Grafana, Jaeger, and OpenSearch.

### End-to-End CI/CD Pipeline for a Node.js Application

- Built a CI/CD pipeline with GitHub Actions that cut manual deployment time by 50%, automating multi-version Node.js testing and building and pushing optimized Docker images to Amazon ECR, deploying to ECS across a microservices architecture. Troubleshot container startup failures, image bloat, and networking issues between services during rollout.
- Secured the pipeline with Gitleaks secret scanning, branch protection, and mandatory code review under GitOps practices.

## CERTIFICATIONS

AWS Certified Solutions Architect – Associate
AWS Certified Cloud Practitioner

## EDUCATION

**BS, Computer Science** 2020 – 2024
*University of Engineering & Technology (UET) — Lahore*
